

DERIVATIVES OF VECTOR-VALUED FUNCTIONS

For each vector-valued function $\vec{r}(t)$ below, find $\frac{d\vec{r}}{dt}$.

$$1. \quad \vec{r}(t) = t\hat{i} + t^2\hat{j} + \frac{1}{t}\hat{k}$$

$$2. \quad \vec{r}(t) = \sqrt{t}\hat{i} + e^{3t}\hat{j} + \ln(t)\hat{k}$$

$$3. \quad \vec{r}(t) = \cos(t)\hat{i} + \sin(t)\hat{j} + \tan(t)\hat{k}$$

$$4. \quad \vec{r}(t) = \frac{t}{1+t^2}\hat{i} + \sec(t)\hat{j} + \frac{e^t - e^{-t}}{2}\hat{k}$$

$$5. \quad \vec{r}(t) = \cos^2(t)\hat{i} + \sin^2(t)\hat{j} + \sec^2(t)\hat{k}$$
