

## CAYLEY'S THEOREM – ANSWER

Theorem: Every finite group  $G$  is isomorphic to a group of permutations acting on a set of objects.

Proof: Instead of a more formal argument, we'll simply take a typical finite group and show how to find a permutation group that is isomorphic to it. In particular, let's look at  $D_3$ , the group of symmetries of an equilateral triangle.

This group is generated by rotations about the center and flips about various axes of symmetry. Also, below is a multiplication table for  $D_3$

|             |             |             |             |             |             |             |
|-------------|-------------|-------------|-------------|-------------|-------------|-------------|
|             | $(1)(2)(3)$ | $(1\ 2)$    | $(1\ 3)$    | $(2\ 3)$    | $(1\ 2\ 3)$ | $(1\ 3\ 2)$ |
| $(1)(2)(3)$ | $(1)(2)(3)$ | $(1\ 2)$    | $(1\ 3)$    | $(2\ 3)$    | $(1\ 2\ 3)$ | $(1\ 3\ 2)$ |
| $(1\ 2)$    | $(1\ 2)$    | $(1)(2)(3)$ | $(1\ 2\ 3)$ | $(1\ 3\ 2)$ | $(1\ 3)$    | $(2\ 3)$    |
| $(1\ 3)$    | $(1\ 3)$    | $(1\ 3\ 2)$ | $(1)(2)(3)$ | $(1\ 2\ 3)$ | $(2\ 3)$    | $(1\ 2)$    |
| $(2\ 3)$    | $(2\ 3)$    | $(1\ 2\ 3)$ | $(1\ 3\ 2)$ | $(1)(2)(3)$ | $(1\ 2)$    | $(1\ 3)$    |
| $(1\ 2\ 3)$ | $(1\ 2\ 3)$ | $(2\ 3)$    | $(1\ 2)$    | $(1\ 3)$    | $(1\ 3\ 2)$ | $(1)(2)(3)$ |
| $(1\ 3\ 2)$ | $(1\ 3\ 2)$ | $(1\ 3)$    | $(2\ 3)$    | $(1\ 2)$    | $(1)(2)(3)$ | $(1\ 2\ 3)$ |

Furthermore, if we use letters to represent the various rotations and flips, then we can rewrite our multiplication table as follows.

$$\begin{aligned}
 e &= (1)(2)(3) \\
 R &= (1\ 2\ 3) \\
 R^2 &= (1\ 3\ 2) \\
 F &= (2\ 3) \\
 FR &= (1\ 2) \\
 FR^2 &= (1\ 3)
 \end{aligned}$$

|                        |                        |                        |                        |                        |                        |                        |
|------------------------|------------------------|------------------------|------------------------|------------------------|------------------------|------------------------|
|                        | <i>e</i>               | <i>R</i>               | <i>R</i> <sup>2</sup>  | <i>F</i>               | <i>FR</i>              | <i>FR</i> <sup>2</sup> |
| <i>e</i>               | <i>e</i>               | <i>R</i>               | <i>R</i> <sup>2</sup>  | <i>F</i>               | <i>FR</i>              | <i>FR</i> <sup>2</sup> |
| <i>R</i>               | <i>R</i>               | <i>R</i> <sup>2</sup>  | <i>e</i>               | <i>FR</i> <sup>2</sup> | <i>F</i>               | <i>FR</i>              |
| <i>R</i> <sup>2</sup>  | <i>R</i> <sup>2</sup>  | <i>e</i>               | <i>R</i>               | <i>FR</i>              | <i>FR</i> <sup>2</sup> | <i>F</i>               |
| <i>F</i>               | <i>F</i>               | <i>FR</i>              | <i>FR</i> <sup>2</sup> | <i>e</i>               | <i>R</i>               | <i>R</i> <sup>2</sup>  |
| <i>FR</i>              | <i>FR</i>              | <i>FR</i> <sup>2</sup> | <i>F</i>               | <i>R</i> <sup>2</sup>  | <i>e</i>               | <i>R</i>               |
| <i>FR</i> <sup>2</sup> | <i>FR</i> <sup>2</sup> | <i>F</i>               | <i>FR</i>              | <i>R</i>               | <i>R</i> <sup>2</sup>  | <i>e</i>               |

When we look at this table, we notice that each row is a permutation of elements in the very first row. However, this does not mean that we are going to say that  $R$  is given by the following permutation:

$$R = \begin{pmatrix} e & R & R^2 & F & FR & FR^2 \\ \downarrow & \downarrow & \downarrow & \downarrow & \downarrow & \downarrow \\ R & R^2 & e & FR^2 & F & FR \end{pmatrix} = (e, R, R^2)(F, FR^2, FR)$$

No, instead we have to be a little more sophisticated so that things will work out easily in the end. In particular, remember that we want to think of our initial elements as occupying positions. Thus,  $e$  is in the first position,  $R$  is in the second position,  $R^2$  is in the third position,  $F$  is in the fourth position,  $FR$  is in the fifth position, and  $FR^2$  is in the sixth position.

|        | 1 <sup>st</sup> | 2 <sup>nd</sup> | 3 <sup>rd</sup> | 4 <sup>th</sup> | 5 <sup>th</sup> | 6 <sup>th</sup> |
|--------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|
|        | $e$             | $R$             | $R^2$           | $F$             | $FR$            | $FR^2$          |
| $e$    | $e$             | $R$             | $R^2$           | $F$             | $FR$            | $FR^2$          |
| $R$    | $R$             | $R^2$           | $e$             | $FR^2$          | $F$             | $FR$            |
| $R^2$  | $R^2$           | $e$             | $R$             | $FR$            | $FR^2$          | $F$             |
| $F$    | $F$             | $FR$            | $FR^2$          | $e$             | $R$             | $R^2$           |
| $FR$   | $FR$            | $FR^2$          | $F$             | $R^2$           | $e$             | $R$             |
| $FR^2$ | $FR^2$          | $F$             | $FR$            | $R$             | $R^2$           | $e$             |

We can now set up our permutations correctly. In the maneuver  $R$ , the first element,  $e$ , moves from position one to position three which corresponds to  $R^2$ .

|        | 1 <sup>st</sup> | 2 <sup>nd</sup> | 3 <sup>rd</sup> | 4 <sup>th</sup> | 5 <sup>th</sup> | 6 <sup>th</sup> |
|--------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|
|        | $e$             | $R$             | $R^2$           | $F$             | $FR$            | $FR^2$          |
| $e$    | $e$             | $R$             | $R^2$           | $F$             | $FR$            | $FR^2$          |
| $R$    | $R$             | $R^2$           | $e$             | $FR^2$          | $F$             | $FR$            |
| $R^2$  | $R^2$           | $e$             | $R$             | $FR$            | $FR^2$          | $F$             |
| $F$    | $F$             | $FR$            | $FR^2$          | $e$             | $R$             | $R^2$           |
| $FR$   | $FR$            | $FR^2$          | $F$             | $R^2$           | $e$             | $R$             |
| $FR^2$ | $FR^2$          | $F$             | $FR$            | $R$             | $R^2$           | $e$             |

The element in the third position,  $R^2$ , moves to the second position which corresponds to  $R$ .

|        | 1 <sup>st</sup> | 2 <sup>nd</sup> | 3 <sup>rd</sup> | 4 <sup>th</sup> | 5 <sup>th</sup> | 6 <sup>th</sup> |
|--------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|
|        | $e$             | $R$             | $R^2$           | $F$             | $FR$            | $FR^2$          |
| $e$    | $e$             | $R$             | $R^2$           | $F$             | $FR$            | $FR^2$          |
| $R$    | $R$             | $R^2$           | $e$             | $FR^2$          | $F$             | $FR$            |
| $R^2$  | $R^2$           | $e$             | $R$             | $FR$            | $FR^2$          | $F$             |
| $F$    | $F$             | $FR$            | $FR^2$          | $e$             | $R$             | $R^2$           |
| $FR$   | $FR$            | $FR^2$          | $F$             | $R^2$           | $e$             | $R$             |
| $FR^2$ | $FR^2$          | $F$             | $FR$            | $R$             | $R^2$           | $e$             |

And the element in the second position,  $R$ , moves to the first position which corresponds to  $e$ .

|                        | 1 <sup>st</sup>        | 2 <sup>nd</sup>        | 3 <sup>rd</sup>        | 4 <sup>th</sup>        | 5 <sup>th</sup>        | 6 <sup>th</sup>        |
|------------------------|------------------------|------------------------|------------------------|------------------------|------------------------|------------------------|
|                        | <i>e</i>               | <i>R</i>               | <i>R</i> <sup>2</sup>  | <i>F</i>               | <i>FR</i>              | <i>FR</i> <sup>2</sup> |
| <i>e</i>               | <i>e</i>               | <i>R</i>               | <i>R</i> <sup>2</sup>  | <i>F</i>               | <i>FR</i>              | <i>FR</i> <sup>2</sup> |
| <i>R</i>               | <i>R</i>               | <i>R</i> <sup>2</sup>  | <i>e</i>               | <i>FR</i> <sup>2</sup> | <i>F</i>               | <i>FR</i>              |
| <i>R</i> <sup>2</sup>  | <i>R</i> <sup>2</sup>  | <i>e</i>               | <i>R</i>               | <i>FR</i>              | <i>FR</i> <sup>2</sup> | <i>F</i>               |
| <i>F</i>               | <i>F</i>               | <i>FR</i>              | <i>FR</i> <sup>2</sup> | <i>e</i>               | <i>R</i>               | <i>R</i> <sup>2</sup>  |
| <i>FR</i>              | <i>FR</i>              | <i>FR</i> <sup>2</sup> | <i>F</i>               | <i>R</i> <sup>2</sup>  | <i>e</i>               | <i>R</i>               |
| <i>FR</i> <sup>2</sup> | <i>FR</i> <sup>2</sup> | <i>F</i>               | <i>FR</i>              | <i>R</i>               | <i>R</i> <sup>2</sup>  | <i>e</i>               |

In other words, so far, we have  $(e, R^2, R)$ . Continuing, we see that the element originally in the fourth position,  $F$ , moves to the fifth position which corresponds to  $FR$ .

|                        | 1 <sup>st</sup>        | 2 <sup>nd</sup>        | 3 <sup>rd</sup>        | 4 <sup>th</sup>        | 5 <sup>th</sup>        | 6 <sup>th</sup>        |

| $F$    | $F$             | $FR$            | $FR^2$          | $e$             | $R$             | $R^2$           |
| $FR$   | $FR$            | $FR^2$          | $F$             | $R^2$           | $e$             | $R$             |
| $FR^2$ | $FR^2$          | $F$             | $FR$            | $R$             | $R^2$           | $e$             |

Thus, the complete permutation for  $R$  is  $R = (e, R^2, R)(F, FR, FR^2)$ . Similarly, the permutation for  $F$ , when we construct it by thinking of the positions that our original elements get move to, is  $F = (e, F)(R, FR)(R^2, FR^2)$ . Now from our multiplication table we can see that  $RF = FR^2$ , and this latter element corresponds to the permutation  $RF = FR^2 = (e, FR^2)(R, F)(R^2, FR)$ . And finally, if we manually multiply our permutations, then we get  $RF = (e, R^2, R)(F, FR, FR^2)(e, F)(R, FR)(R^2, FR^2) = (e, FR^2)(R, F)(R^2, FR) = FR^2$ .

So what does this show us? Well, we've demonstrated how to convert each element in our group to a permutation that acts upon the elements of the group, and we've shown that a product such as  $RF = FR^2$  gives us the same result,  $RF = (e, R^2, R)(F, FR, FR^2)(e, F)(R, FR)(R^2, FR^2) = (e, FR^2)(R, F)(R^2, FR) = FR^2$ , when we express our group elements as permutations. Therefore, every finite group  $G$  is isomorphic to a group of permutations acting on a set of group elements themselves.
